/note="Organ: uterus; Vector: pT7T3-Pac; Site_1: Not I; Site_2: Eco RI; 1st strand cDNA was primed with a Not I oligo(dT) primer [5'
                                                               AACTGGAAGATTCGCGGCCGCCTTTTTTTTTTTTTTT 3'],
double-stranded cDNA was ligated to Eco RI adaptors
(Pharmacia), digested with Not I and cloned into the No
and Eco RI sites of the modified pT773 vector. Library
went through one round of normalization. Library

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RBS
                                                                                                                                     correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most IMPORTANT: This sequence MAX NOT be the entire insert of the sequence clone. It may be shorter because we only sequence overlapping sections once, or longer, because we only sequence asmall overlap between neighbouring submissions. Cosmid 9810 lies between 2E9 and 5B8 in the Asel-B genomic restriction fragment.

In 33320
prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
lun/cgi-/www.nih.go.jp/
lun/cgi-bin/frameplot.pl CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /gene="SC9B10.02"

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                    13037: contig of 13037 bp in length
13054: gap of unknown length
183800: contig of 170746 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene

in acdons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the Frameplot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
jun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (aty, ttg or (att)) which is preceded by an upstream initiation codon. If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most sequence clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlapp with cosmids E63 and E39 on the Asel-E genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note="Overlap with Streptomyces coelicolor cosmid StE63."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Jote-"SCESS.01, partial CDS, cdaPS3, CDA peptide synchetase III, len: >332a3. Constitutes the the majority of cdaPS3, CDA peptide synthetase III, part of the calcium-dependent antibiotic (CDA) blosynthetic cluster from Streptomyces coelicolor. CDA is a peptide antibiotic multifunctional peptide synthetase enzyme. This partial CDS encodes a subunit of this enzyme suspected to be
                                                                                                        project,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Details of S. coelicolar sequencing at the Sanger Centre are available on the World Wide Web.

(WLE, http://www.sanger.ac.uk/Projects/S_coelicolor/) CDS are numbered using the following system eg SC/B7.01c. SC (S. coelicolor), 787 (cosmid name), .01 (first CDS), c (complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated haemopoletin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g. neuronal cells and cells isolated haemopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

cig. meuronal gristians of the new property of the new property of the new property of the new projection between the new projection between the new projection between the new projection between the new projection of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening. Sequence 938 BP; 243 A; 245 C; 272 G; 178 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-5EP-1998 (first entry)

For any angulation of celebration of developing products for modulating proliferation, differentiation and survival of cells, For modulating proliferation, differentiation and survival of cells, For e.g. neuronal cells

Claim 7: Page 93-95; 182pp; English.

The nucleotide sequence was generated by a SN RACE of brain CDNA using CC Interaction between the novel Haemopoletin receptor (HR) and ifferentiation and survival of a wide variety of cells. The HR and it's darivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of differentiation and issues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation come survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

The interval of the interval of the interval of the interval of cells, it is a novel had possible in the interval of cells, it is a novel had followed by the interval of cells, it is a novel had followed by the interval of cells. Interval of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, considerating neuronal proliferation, differentiation and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The conducts can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Tor mountains, received the instance of the movel HR NR6.

Claim 4, Page 77.81; 182pp; English.

The haemopoietin receptor (HR) NR6.1 is a form of the novel HR NR6.

Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to requiate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            v27140;

New nucleic acid encoding U4 haematopoietin receptor superfamily chain - potentially useful, e.g. for modulating call proliferation or immune response, for treating cancer and auto:immune disease Claim 1; pages 25-26; 38pp; English.

This is the nucleotide sequence encoding the murine U4 protein from the haematopoietin receptor superfamily, used in the method of the invention for the modulation of call proliferation, or the immune response. Transformed mammalian calls are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune cell differentiation).

New isolated hemopoletin receptor - used for developing products

for modulating proliferation, differentiation and survival of cells,

e.g. neuronal cells

Claim 5; Page 84-87; 182pp; English.

The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6.

Interaction between the novel HR and a ligand facilitates proliferation,

Interaction between the novel HR and a ligand facilitates proliferation,

Claim 5; Page 84-87; 182pp; English.

The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6.

Interaction between the novel HR and a ligand facilitates proliferation,

Claim 5; Page 84-87; Page 84-87; Page 8-99;

Corgulate development, maintenance or regeneration in an array of

different cells and tissues in vitro and in vivo. They can be present in

Claim 5: The HR and tissues in vitro and in vivo. They can be present in

Claim 5: The HR and tissues in vitro and in vivo. They can be present in

Claim 5: The HR and tissues in vitro and in vivo. They can be present in

Claim 5: The HR and tissues in vitro and in vivo. They can be present in

Claim 5: The HR and tissues in vitro and in vivo. They can be present in

Claim 5: The HR and tissues in vitro and in vivo. They can also be used for detection and diagnosis,

Claim 5: The HR and tissues in vitro ancers, or for drug screening.

Claim 5: The HR and tissues the tissues the vitro and tissues the vitro and diagnosis,

Claim 5: The HR and tissues the vitro and to drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1021
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardlac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand to purify Zcytor5 and therapeutically to modify Zcytor5 ligand effects.

Sequence 1724 BP; 550 C; 500 C; 324 T;
17-MAR-1999 (first entry)

CDNA encoding rat Zoytor5.

the heamatopoletin receptor superiamily used in the method of the invention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, sequence 1579 BP; 304 A; 535 C; 473 G; 267 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

Disclosure; Page 63-66; 55pp; English.

The present sequence encodes a protein designated Zcytor5, which is a cytokinhi-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart of andiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 punk or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the therapeutically to modify Zcytor5 ligand effects.

Claim 9; Fig 3; 182pp; English.

The NR6 protein is a novel Haemopoietin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

New Jobated heemopoletin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g. neuronal cells

cig. neuronal cells

cig. neuronal cells

the neuronal cells

The NR6 gene encodes a novel Haemopoletin receptor (HR). Interaction

between the novel HR and a ligand facilitates proliferation,

differentiation and survival of a wide variety of cells. The HR and it's products can be used for modulating the activity of the receptors e.g. to requirate development, maintenance or regeneration in an array of aliferent cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
